

Crypto + Forex News Bot (Telegram)

Posts new crypto and forex headlines to a Telegram chat/channel as they're published, by polling free RSS feeds (no paid API keys needed).

1. Create your bot

1. Open Telegram, message @BotFather
2. Send `/newbot` , follow the prompts
3. Copy the token it gives you (looks like `123456789:ABCdefGhIJKlmNoPQRstuVWXyz`)

2. Get your chat ID

- **Personal chat:** send your new bot any message, then open in a browser:
`https://api.telegram.org/bot<YOUR_TOKEN>/getUpdates` Look for `"chat":{"id":123456789, ...}` — that number is your chat ID.
- **Channel:** create a channel, add your bot as an admin, then just use the channel's public username as the chat ID, e.g. `@my_crypto_news` .

3. Install & run

```
pip install -r requirements.txt

export TELEGRAM_BOT_TOKEN="123456789:ABCdefGhIJKlmNoPQRstuVWXyz"
export TELEGRAM_CHAT_ID="123456789"           # or "@my_crypto_news"

python bot.py
```

The first run “primes” the database with whatever’s currently in the feeds (so you don’t get flooded with old news), then starts posting new articles as they appear — checked every 10 minutes by default.

4. Customize

Open `bot.py` and edit:

- `FEEDS` — add/remove RSS sources per category
- `POLL_INTERVAL_SECONDS` — how often to check (default 600s = 10 min)

5. Keep it running 24/7

Pick one:

- **VPS / Raspberry Pi:** run as a `systemd` service or inside `tmux` / `screen`
- **Railway / Render:** deploy as a “background worker”, set the two env vars in their dashboard
- **Docker:**

```
FROM python:3.12-slim
WORKDIR /app
COPY . .
RUN pip install -r requirements.txt
CMD ["python", "bot.py"]
```

Notes

- All feeds used are free and public (CoinDesk, Cointelegraph, CryptoPotato, CryptoPanic, ForexLive, Investing.com, FXStreet). If one goes down or changes its URL, just swap it out in `FEEDS`.
- Article de-duplication is stored in a local SQLite file (`seen_articles.db`) next to the script.
